

FENAMIDONE 4.44% + FOSETYL-AL 66.67% WDG

FUNGICIDE

Innovative Combination

Systemic Movement

Plant Defense Activation

Complete Protection

TARGET DISEASES

Downy Mildew

Late Blight

Phytophthora Fruit Rot

PRODUCT DESCRIPTION

Innovative fungicide combination providing systemic upward and downward movement for complete plant protection. Offers preventive, curative, and plant defense activation properties against oomycete diseases with excellent residual activity

CROPS

Grapes

Vegetables

Potato

Cucurbits

MODE OF ACTION

Fenamidone inhibits mitochondrial respiration in the fungal cytochrome bc1 complex, while Fosetyl-Al acts systemically with both direct fungicidal activity and induced plant resistance by stimulating natural defense mechanisms. Provides comprehensive protection from roots to shoots

TARGET DISEASES

Downy mildew - Plasmopara viticola/Pseudoperonospora cubensis
Late blight - Phytophthora infestans
Phytophthora root rot

DOSAGE

Grapes – Downy mildew: 2000-2500gm/500-750L/90 days PHI

APPLICATION RECOMMENDATIONS

Apply preventively or at early disease stages, use in resistance management programs with alternate modes of action, provides both foliar and root protection
