

ALBENDAZOLE 10% SC

ANTHELMINTIC/NEMATICIDE

**BROAD-SPECTRUM
ANTHELMINTIC**

TUBULIN BINDER

LIVESTOCK & SOIL USE

**OVICIDAL &
LARVICIDAL**

TARGET PESTS

Root-knot nematode

Lesion nematode

Nematode

CROPS/USE

- Livestock (cattle, sheep, goats)
- Soil treatment for plant-parasitic nematodes

PRODUCT DESCRIPTION

Broad-spectrum benzimidazole anthelmintic effective against internal parasites in livestock and agricultural applications. Systemic activity provides control of nematodes, cestodes, and trematodes with single application.

MODE OF ACTION

Albendazole binds to tubulin, preventing polymerization and disrupting microtubule formation in parasite cells. This inhibits glucose uptake, depletes energy reserves, and causes parasite death. Shows ovicidal and larvicidal activity.

TARGET PESTS

- Gastrointestinal roundworms
- Lungworms
- Tapeworms
- Root-knot nematodes
- Lesion nematodes

COMPREHENSIVE DOSAGE TABLE

Application	Target Pest	Dosage	Formulation
Livestock (oral)	Roundworms	7.5 mg/kg body weight	As per vet advice
	Tapeworms		
Soil Treatment	Plant-parasitic nematodes	5-10 L/ha	5000-10000 ml
Drench Application	Root-knot nematodes	3-5 L/ha	3000-5000 ml
